

Healthcare After Tsunami Aceh

Oleh : Rusmadi

Kepala Bidang Pencegahan dan
Kesiapsiagaan BPBD Banda Aceh.

Condition After Tsunami Aceh

- 120,514 dead
- 114,897 missing -- and presumed dead
- 403,428 displaced
- 80% of Aceh's healthcare workers killed

Indonesian Gov. have established an Health Emergency Disaster Response before Tsunami in Aceh

- Since 2000, the Ministry of Health established a Integrated Emergency Handling System (SPGT/ Sistim Penanganan gawat terpadu)
- SPGT emphasize on quick-response and “saving life and living safe”
- SPGT divided into 3 service systems:
 - Pre-hospital services.
 - Hospital services.
 - Intra-hospital services.

Pre-Hospital Services

1. Public Security Center

- Health office, Fire Fighting Brigade, Police and Neighborhood Voluntary

2. Disaster Alert Brigade

- Trained officers from various local offices

3. Ambulance Services

- Conducted by “Command System”

4. Call Center

Hospital Services

1. Hospital disaster plan (mandatory)
2. Emergency Unit
3. Hospital Alert Brigade (24 hours)
4. Quick Services Response:
 - Quick help request handling
 - Quick diagnostic
 - Quick handling
 - Better ability/quality

Services During Disaster Event

- Command and Control Center (Pusdalop)
- Mobilizing resources
- Simulation
- Evaluation and Reporting

Intra-Hospital Services

- Banda Aceh has 4 government hospitals, 6 private hospitals, and 11 local public health services . There are also numbers of ambulances owned by several political parties

Thank you
